

Guide
Generating SMTP Data with Rapidmail

Lead-in

On the next pages you will find a guide on how to generate **SMTP-serverdata** to use them in LeadHound.

You will need SMTP-data if you want to send **thank-you-mails** to Leads **without having an own mailserver** that you can use.

Junith Digital Agency has no connections to rapidmail. **Rapidmail** is only an recommendation of us. Please note that, depending on your tariff, with sending e-Mails costs may arise. You can find them on rapidmail's pricelist.

Quick guide

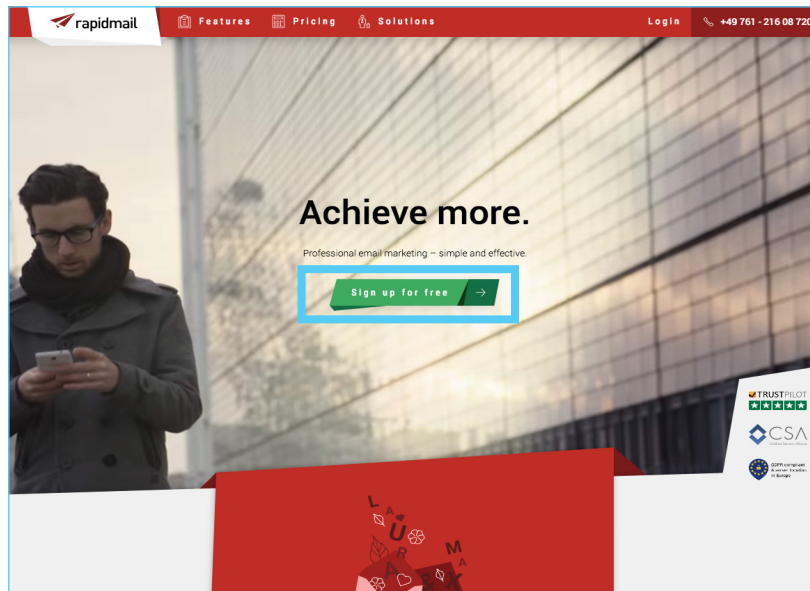

1. Go to **www.rapidmail.com**
2. Create a **free account**
3. Login
4. Click on the menu item **Features > Transaction emails > manage projects**
5. Create a **new project**
6. Copy the newly gotten data into **LeadHound**

Important!

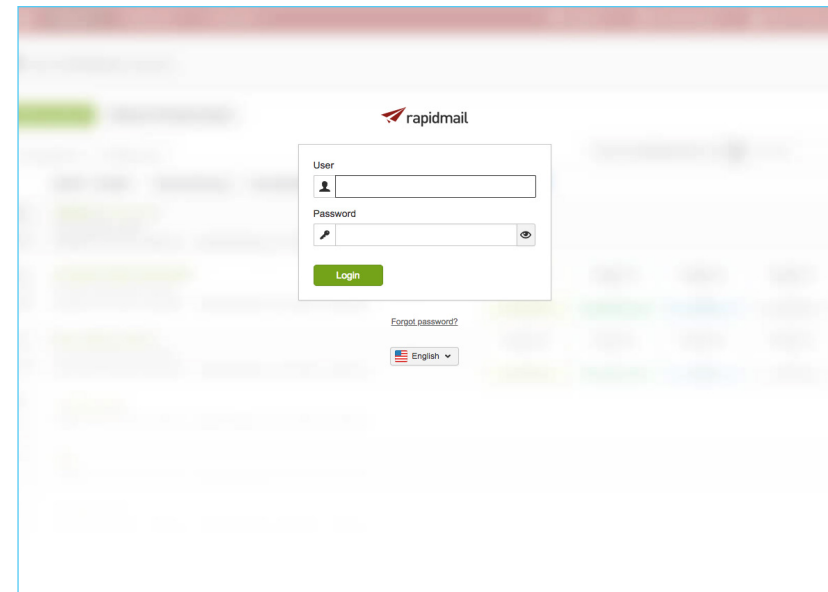

The feature transaction mails has to be unlocked by rapidmail firstly. As soon as you requested the free activation it takes a few minutes until you get the confirmation email from rapidmail. (Status Februar 2018)

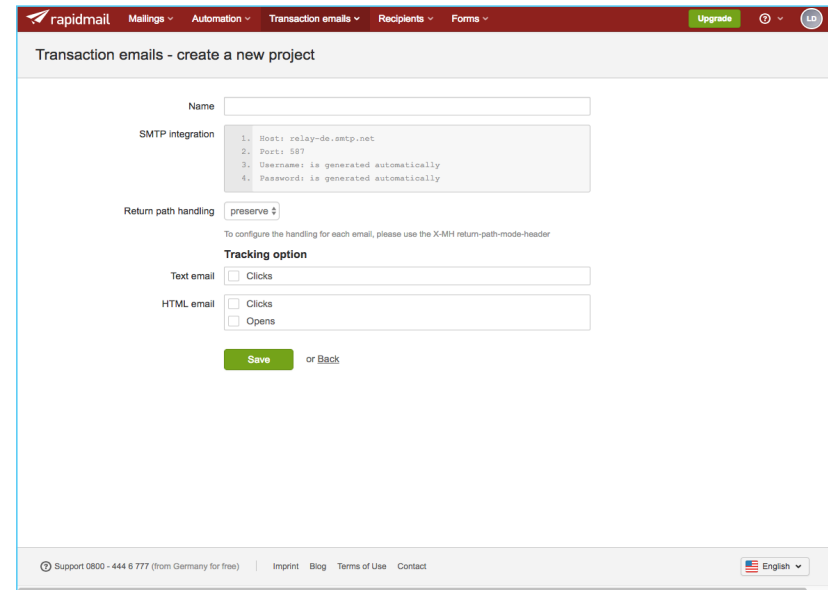

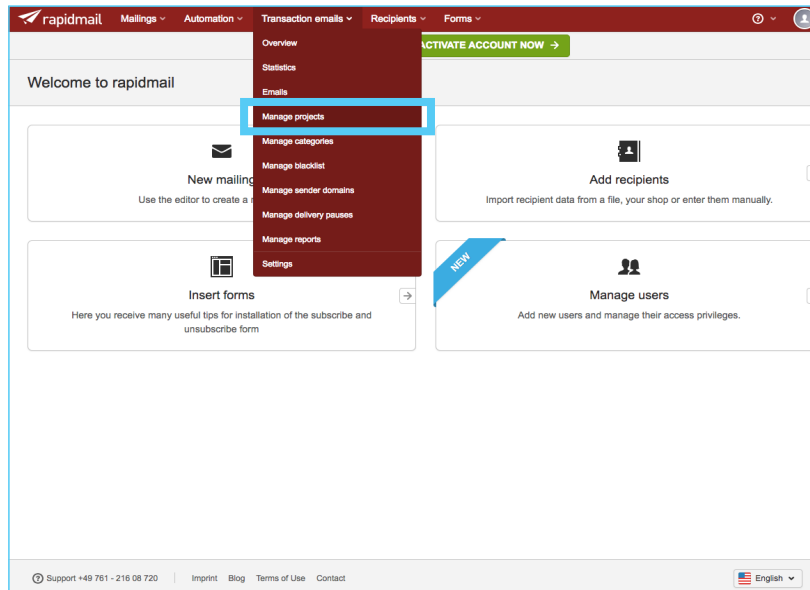

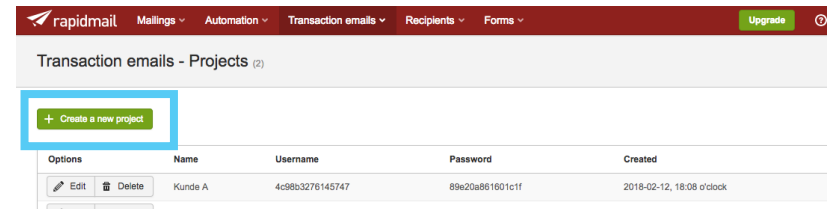

Anleitung

1. Go to **www.rapidmail.com**
2. Create a free account

3. Sign in (the Login button is in the upper right corner)

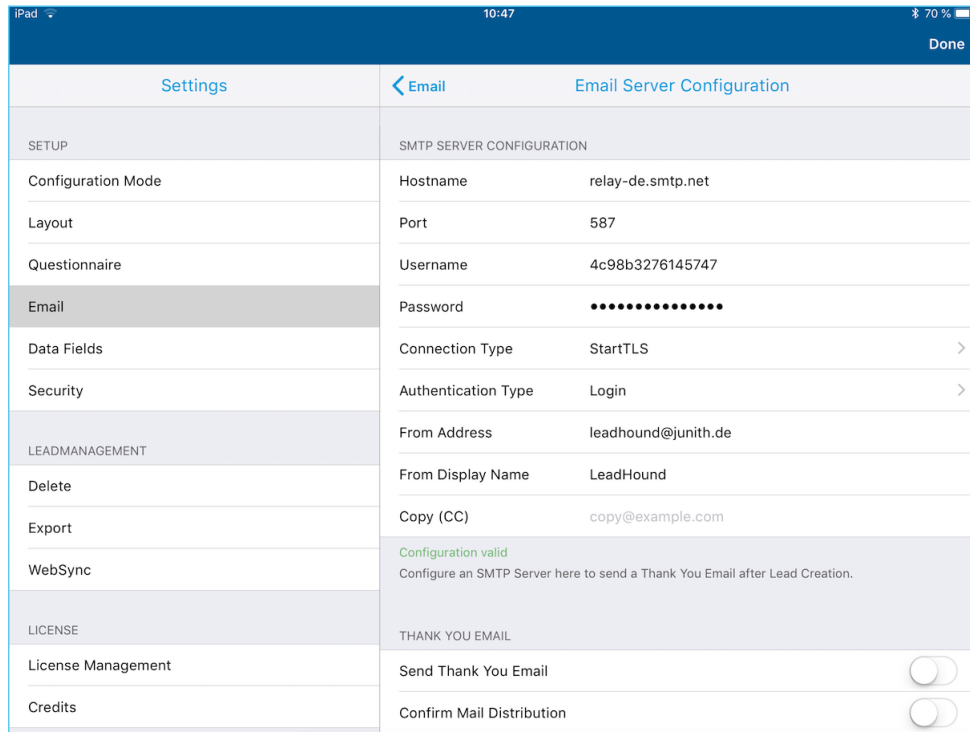

4. Go to the menu item **Transaction mails** and click on **Manage projects**

Important!

You have to get the Transaction mails feature unlocked otherwise you won't be able to follow the next steps.

5. Create a new project

6. Copy the newly gotten data into your **LeadHound App**
